

akce : Realizace úspor energie-zateplení objektu a výměna oken MDDM Školní 231, Ostrov

The timeline illustrates the progression of the COVID-19 epidemic in China. It begins with the initial outbreak in Wuhan in January 2020, followed by the implementation of strict lockdowns in February 2020. The timeline shows subsequent waves of infection across other regions, with major peaks occurring in March 2020 and May 2022. Key events include the start and end of various phases of the epidemic, such as the initial outbreak, the implementation of strict lockdowns, the subsequent waves of infection, and the eventual decline of the virus. The timeline is marked with dates and labels indicating the start and end of various phases of the epidemic.
